New web technologies that shape future business models

Figure 1. Transition in web technologies

	1996	2004	2021
	Web 1.0	Web 2.0	Web 3.0 (Still in development)
	The Hypertext Web	The Social Web	The Semantic Web
Features	Read-only and Static Web	Interactive	Intelligent and decentralised
Content	Static content, passive viewing	Dynamic content, platform, collaborate	AI, 3D, blockchain, web learning
Use Cases	Content and information publishing	Social Media, Microblogs, content hosting, podcasts	DeFi, tokenization of asset, online gaming, distributed ledgers, NFT, CBDC, P2P transfer
Key Technologies	Content delivery network, HTML/portals, Netscape	Mobile, Applications, Big data, AI, blockchain	Blockchain apps, advanced AI, ML, Augmented Reality, IoT, 5G
Challenges	Lacks two-way communication option for users, No algorithms	Authentication controls, data ownership, Malware, data leak, data integrity	Personal data protection, cybercrime, AI bias
Examples	CNN, BBC	Amazon, Apple, Meta, Microsoft, Twitter, Google, Tik Tok	Amazon Alexa, Wolfram Alpha, Apple's Siri

Digital Transformation: ??

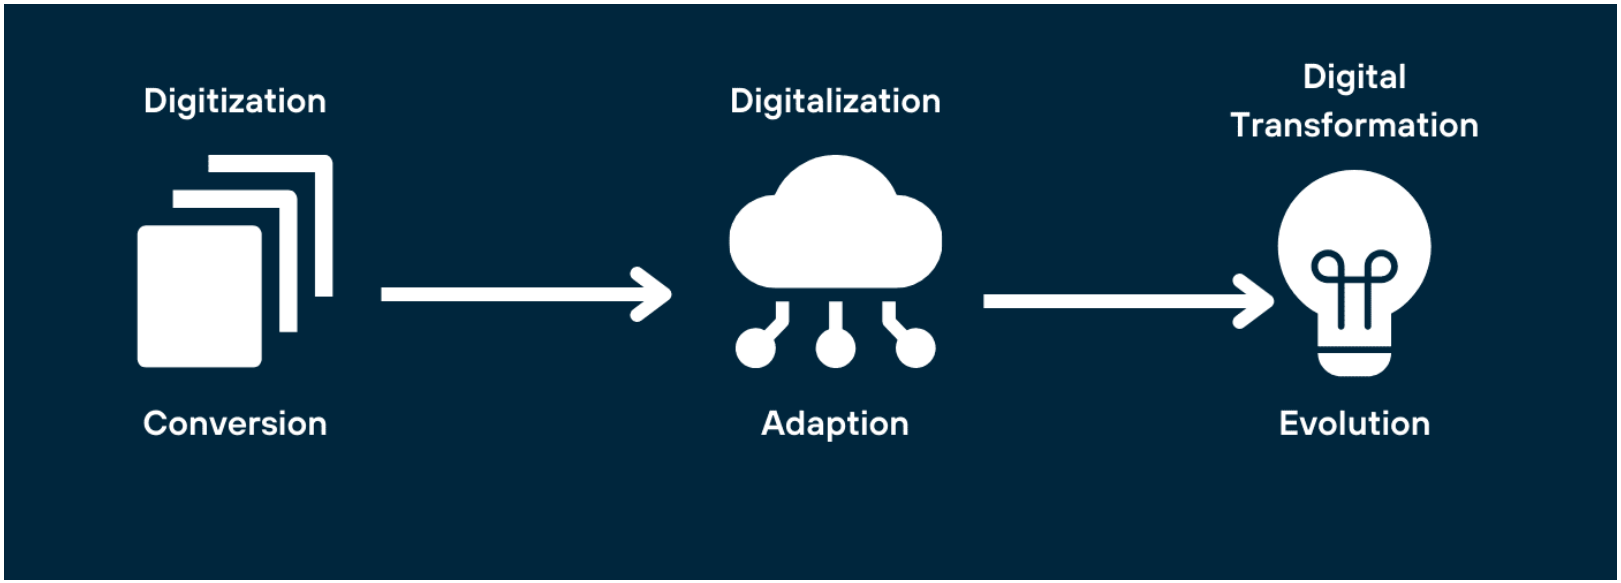
- Digital Transformation is everywhere!

- But do we really understand it?

- Is Digital Transformation about technology?

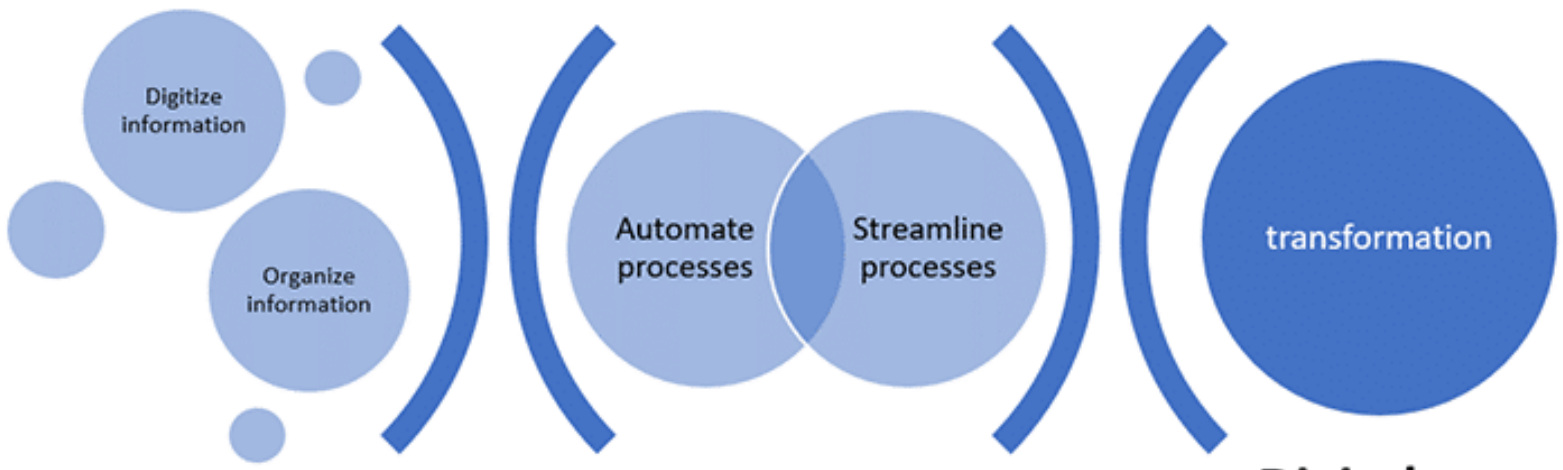
© Kumar Pudashine

Digitization vs Digitalization vs Digital Transformation



© Kumar Pudashine

Digitization vs Digitalization vs Digital Transformation



Digitization

The process of changing from analog to digital form.

Digitalization

The process of using digital technologies and information to transform individual institutional operations.

Digital Transformation

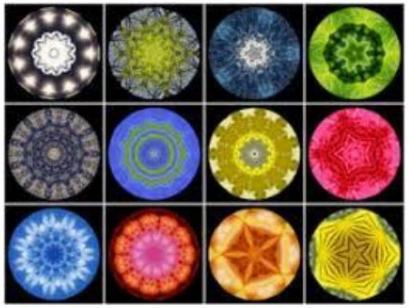
The process of optimizing & transforming the institution's operations, strategic directions & value proposition through deep & coordinated shifts in culture, workforce & technology.

CONNAMIX BUSINESS SOLUTIONS

© Kumar Pudashine

In Essence, Digital Transformation is

- **CUSTOMER** lead
- **STRATEGY** driven
- **INNOVATION** backed
- **BUSINESS MODEL** transforming
- **VALUE CHAIN** changing
- Enabled by **DIGITAL TECHNOLOGIES and DATA**



80% *plus* of Digital Transformations fail in the first attempt!

Digital Transformation Means Adopting a New Culture: Here's How To Do It

In much the same way an athlete is constantly dedicated to an all-encompassing lifestyle in staying fit and preparing for success, organizations hoping for transformation must embrace a cultural commitment to digital fitness

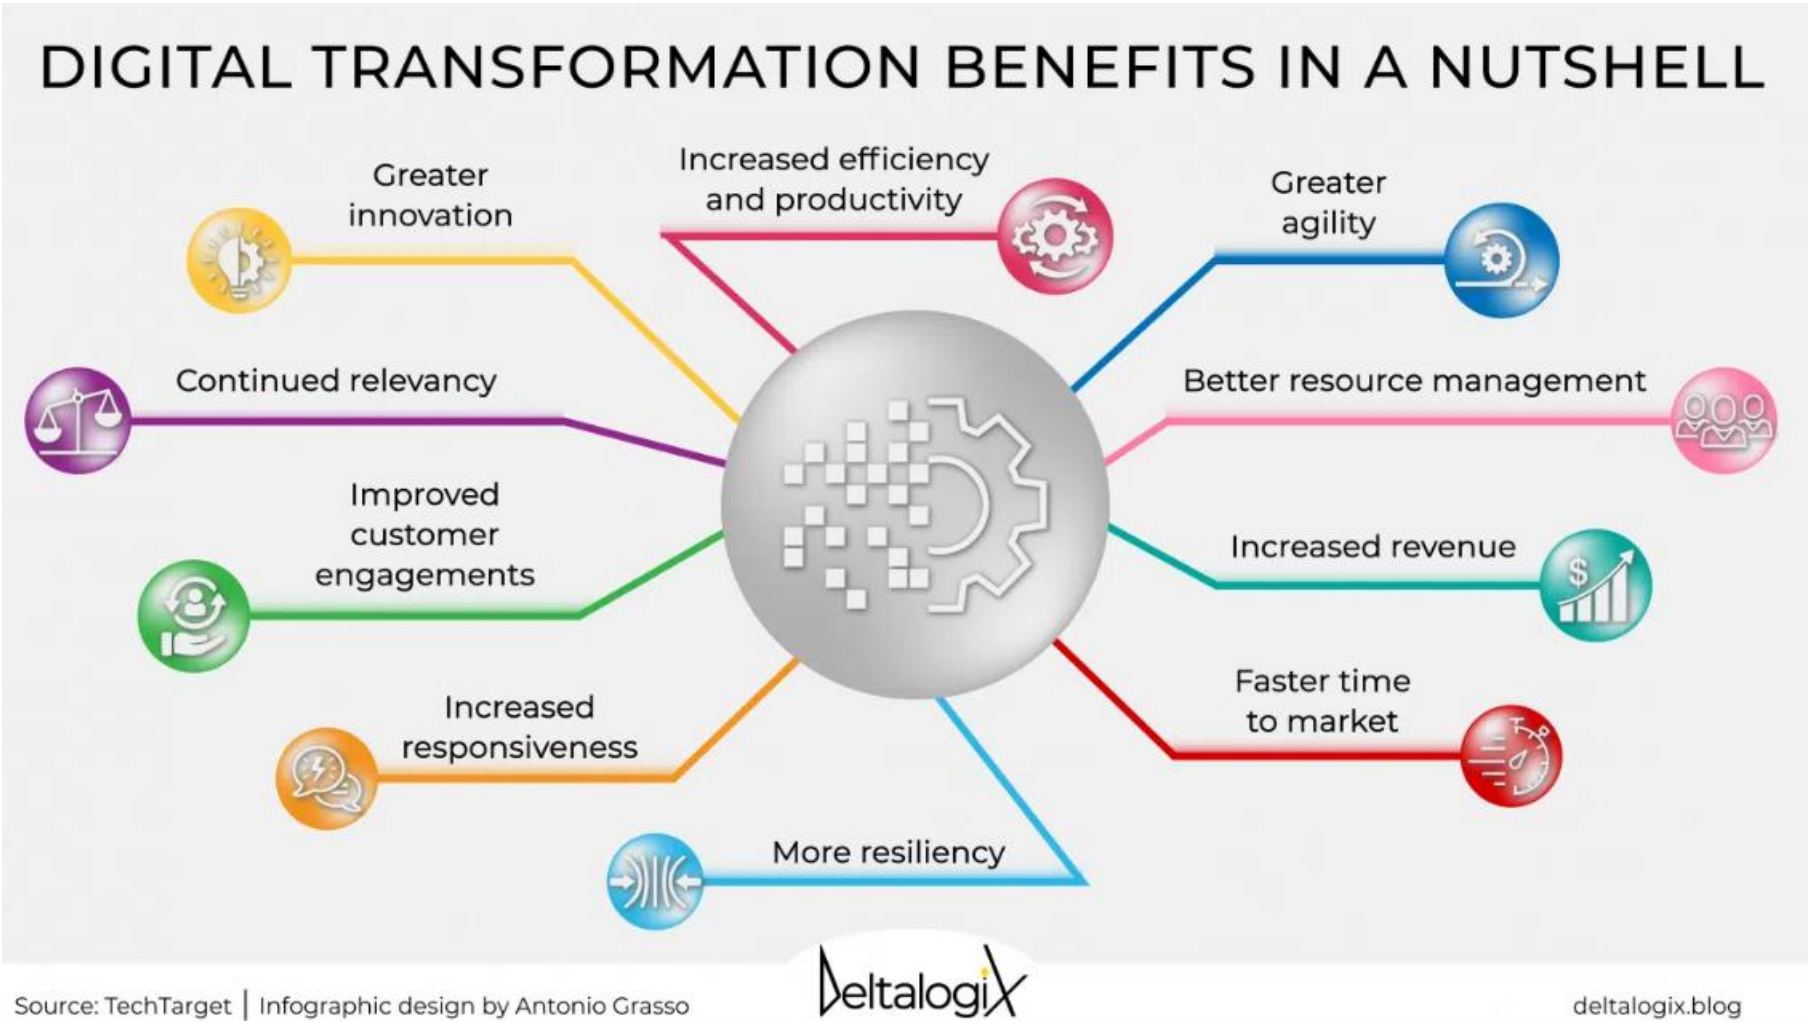
What is digital transformation?

Digital transformation is the process of using technology to create new ways of doing business. The concept can comprise changing existing systems or building new ones.



DIGITAL TRANSFORMATION BENEFITS IN A NUTSHELL
Greater innovation
Increased efficiency and productivity
Greater agility
Continued relevancy
Better resource management
Improved customer engagements
Increased revenue
Faster time to market
Increased responsiveness
More resiliency

7 drivers for digital transformation in 2023

1. Creating new business models
2. Enhancing customer experiences
3. Modernizing IT infrastructure
4. Optimizing operational efficiency
5. Upgrading talent acquisition
6. Promoting external partner collaboration
7. Implementing data-driven decision-making

2023 Digital Transformation trends to watch

- Customer Data Platforms (CDP)
- Cybersecurity and privacy focus
- Democratization of AI
- Multi-cloud architecture
- Contactless solutions, digital payments & BNPL
- Acceleration of automation
- 5G technology
- Data Analytics & business intelligence
- Composable enterprise
- IoT (Internet of Things)
- Robotic process automation (RPA)

The 8 steps to enabling digital transformation

1. Create a clear vision
2. Assess current processes
3. Undergo risk management
4. Establish proper KPIs
5. Think people-first
6. Encourage innovation
7. Start small
8. Monitor progress

IT and Business Alignment: Case Study

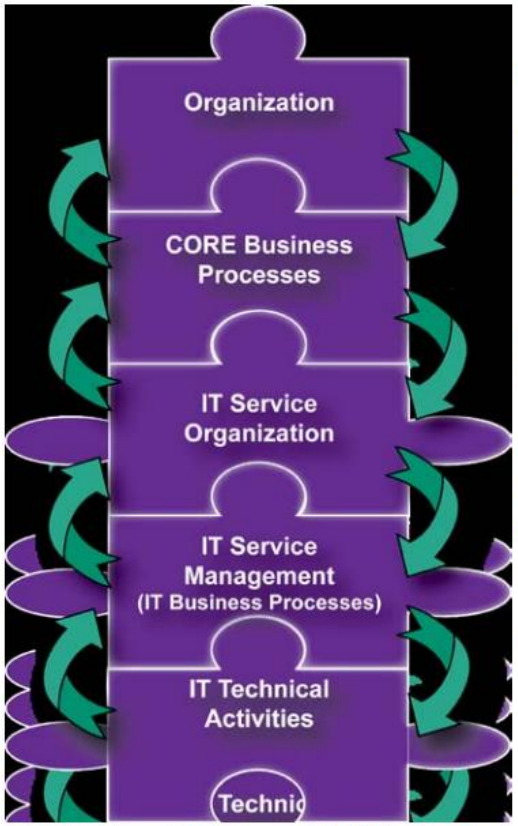

Figure 1.B – Business and IT Alignment

Example to illustrate business and IT alignment:

Our Business: A fashion store

What are some of our organization's objectives or strategic goals?

- We want to make a lot of money $$$!
- We want to have a good image and reputation

What Business Processes aide in achieving those objectives?
Retail, marketing, buying, procurement, HR etc.

What IT Services are these business processes dependent on?
Web site, email, automatic procurement system for buying products, Point of Sale Services

We have ITSM in order to make sure the IT Services are:

- What we need (Service Level Management, Capacity Management etc)
- Available when we need it (Availability Management, Incident Management etc.)
- Provisioned cost-effectively (Financial Management, Service Level Management)

© Kumar Pudashine

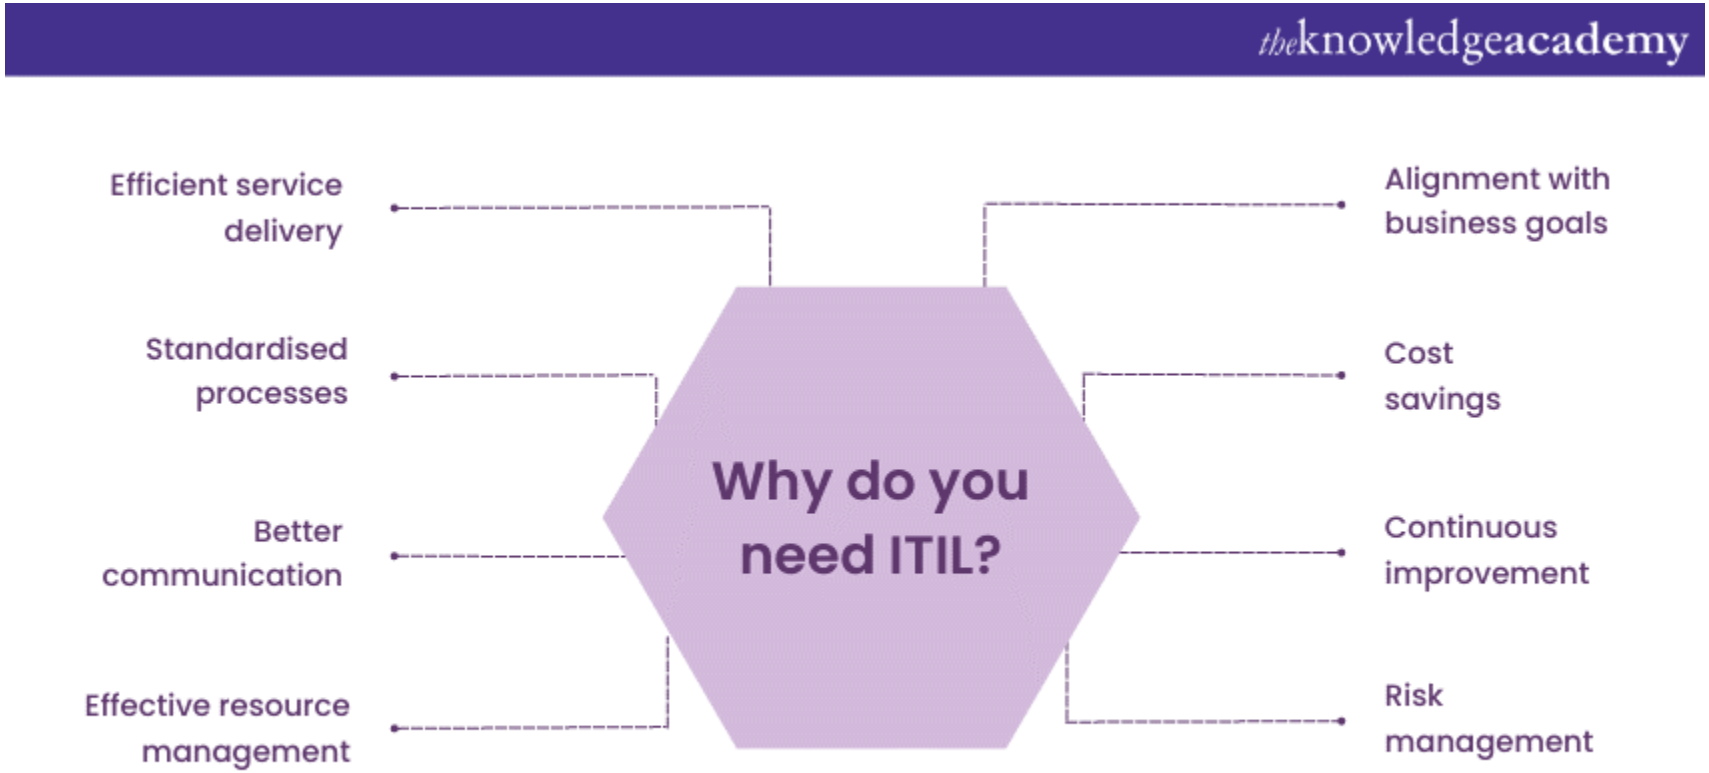
ITIL : What It is ?

- Information Technology Infrastructure Library
- Evolve from UK Government's effort to document how successful organization approached Service Management.
- Originally Created in Late 80's by UK Government.

ITIL Considered as Best Practice Frameworks for IT Service Management

© Kumar Pudashine

ITIL : Why do you need ??



© Kumar Pudashine

Basic Concept

#Service

- A Service is a mean of delivering value to customers by facilitating outcomes customers want to achieve without the ownership of specific costs and risk.
- Enhance Performance
- Analogy : Want to Have Good Food in Resturant

#IT Service

- IT Service is made up of a Combination of Information Technology, People and Process
- Manage People, Process,Product and Partners

© Kumar Pudashine

Classification of IT Services ??

#Core Service

- What the customer wants and is ready to pay for it.
- Example : RMS, Email Service

#Enabling Service

- Needed in order for a Core Service to be delivered.
- It may not be visible to Customer.
- Example : Internet Bandwidth, Firewall, Data Center

#Enhancing Service

- Value added to Core to make it more exciting for Customers.
- Example : NEA Mobile App

© Kumar Pudashine

Types of IT Services??

#Internal Customer-Facing Service

- IT Service that directly supports another Business Process.
- Example : IT Supporting of HR, Account

#External Customer-Facing Service

- IT Service that is Provided to External Customers.
- Example : IT Supporting of Other Organization

#Supporting Service

- A Service that is not directly Used by Business but is required.
- Example : DHCP, DNS, Firewall.

© Kumar Pudashine

Services Management

A Set of Specialized Organizational Capabilites for Providing Value to Customers in the Form of Services

Transforming Resource into Valuable Service is at the Core of Service Management.

Matured Service Providers's Capabilities helps to Enhance better Quality Servies

"Ok, how about this motto: 'If you are unhappy for any reason, we will feel really bad'."

© Kumar Pudashine

IT Services Management

The Implementation and Management of Quality IT Services that meet the Needs of the Business.

IT Service Management is Performed by IT Service Providers through the mix of People, Process and Information Technology.

IT Service Management is Used by Different Management Frameworks and Organizations Seeking Governance and Increased Maturity of IT Operations

Roles and Responsibilities : RACI Matrix

#Responsible [Do It]

- ✓ Person or People Responsible for Doing it.

#Accountable [Get It Done]

- ✓ Only one person can be accountable for each task.

#Consulted [Give and Take]

- ✓ People who are Consulted

#Informed [Get Informed]

- ✓ People who are Kept Up to Date

© Kumar Pudashine

RACI Matrix : Sample ??

Example RACI Chart

Project Deliverable (or Activity)	Project Manager	Strategist	Designer	Front End Developer	Back End Developer
Design site map	C	R	A	I	I
Design wireframes	C	A	R	I	I
Create style guide	A	C	R	C	I
Code templates	A	I	C	R	C

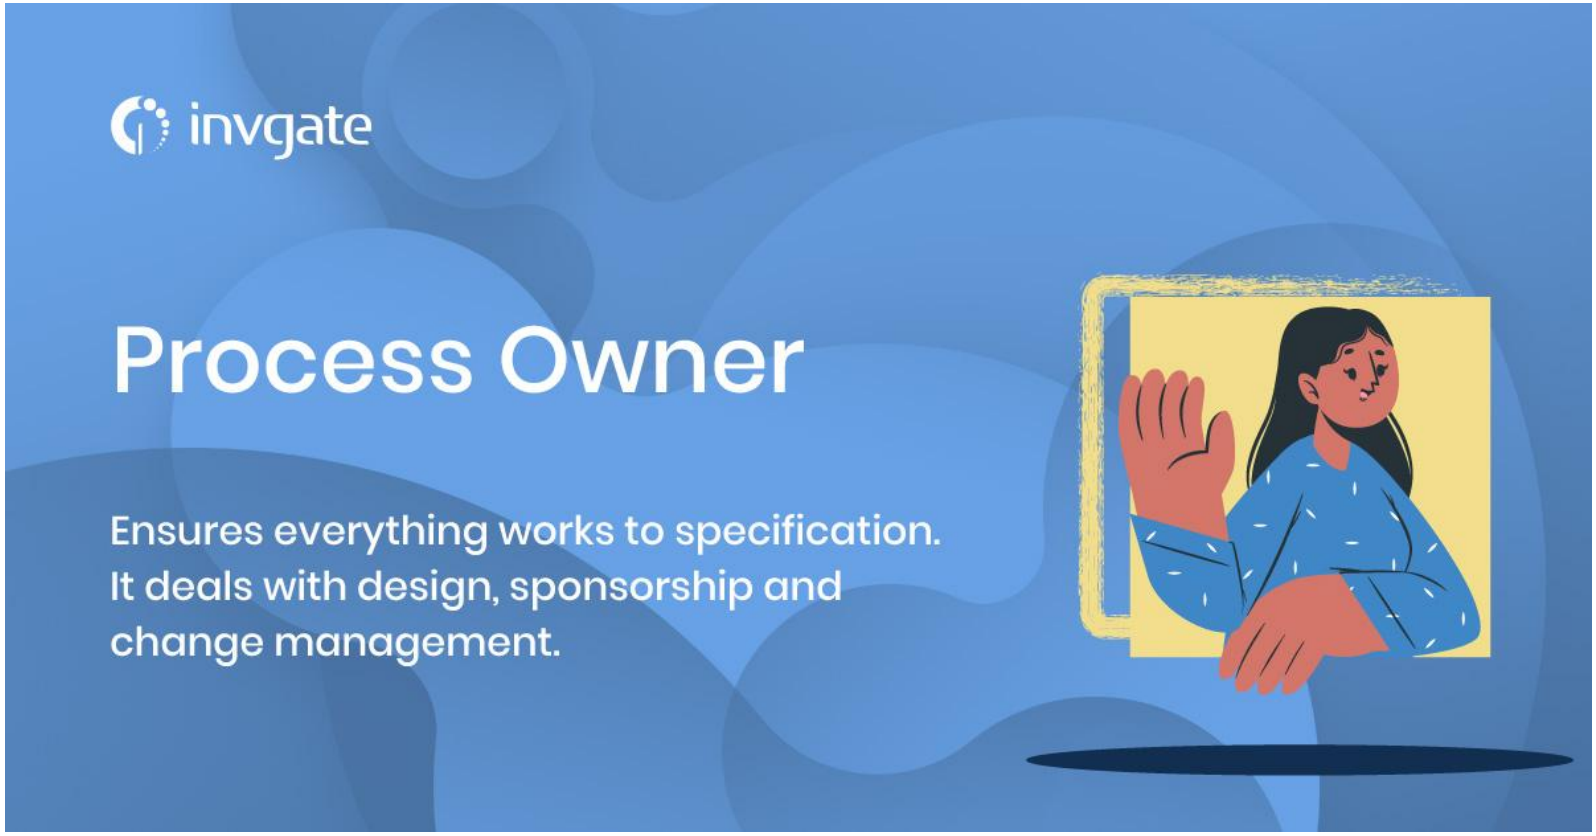
© Kumar Pudashine

ITIL Roles : Four Generic Roles

1. Process Owner
2. Process Manager
3. Process Practitioner
4. Service Owner

© Kumar Pudashine

ITIL Roles : Process Owner



© Kumar Pudashine

ITIL Roles : Process Owner

The **Process Owner's main responsibility is to make sure the process they own operates as intended**.

- **Example Role:** Head of Service Operations
- **Example Processes Owned:** Incident Management, Request Fulfilment, Access Management, Event Management, and Problem Management.

© Kumar Pudashine

ITIL Roles : Process Manager

© Kumar Pudashine

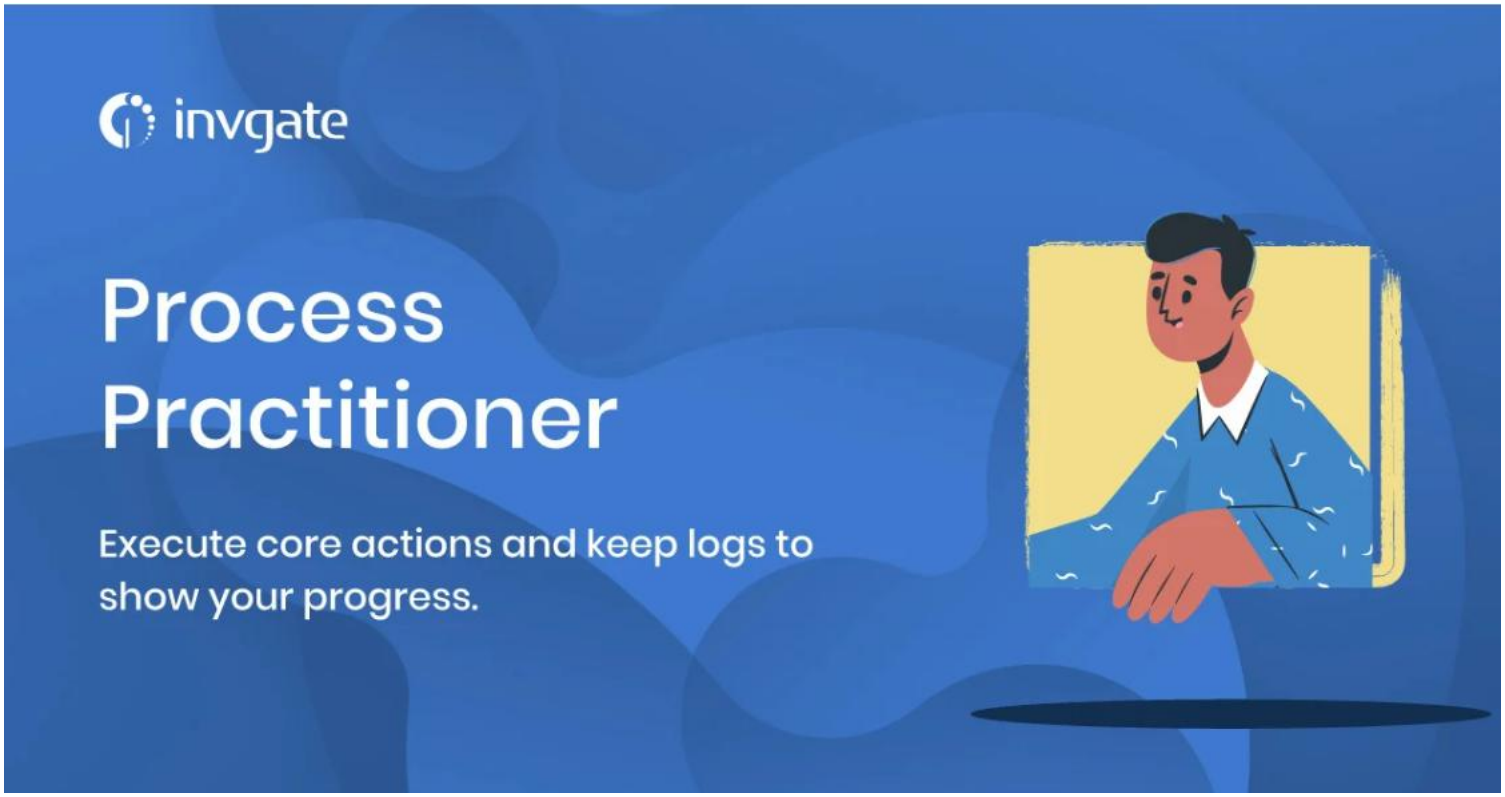
ITIL Roles : Process Manager

Process Managers should collaborate with the owner of the process to work out how activities will be carried out and are then accountable for ensuring they take place.

- **Example Role:** IT Service Desk Manager
- **Example Processes to Manage:** Incident Management and Request Fulfilment

© Kumar Pudashine

ITIL Roles : Process Practitioner



© Kumar Pudashine

ITIL Roles : Process Practitioner

Process Practitioners are the people who carry out the core activities of a process.

- **Example Role:** IT Service Desk Agent
- **Example Processes Involved with:** Incident Management and Request fulfilment

© Kumar Pudashine

ITIL Roles : Service Owner

© Kumar Pudashine

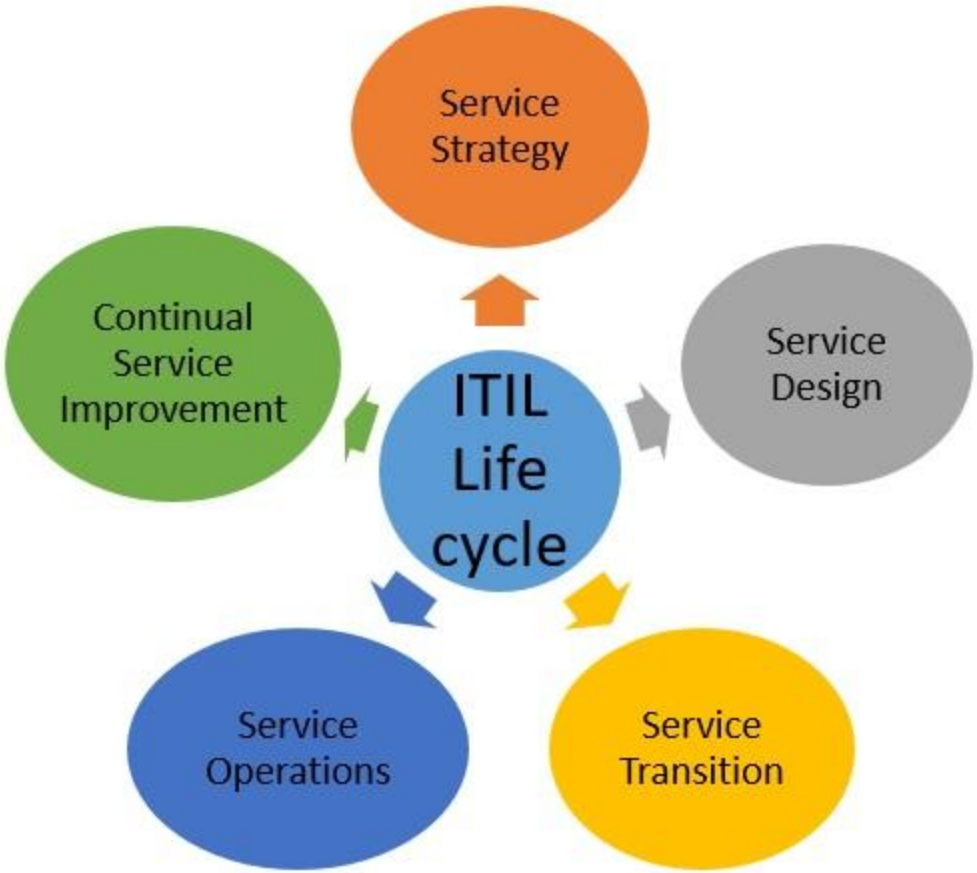
ITIL Roles : Service Owner

- ✓ The Service Owner is responsible for the end-to-end delivery of a specific IT service within an organization
- ✓ Service owners ensure that their service is delivered within agreed service levels

- **Example Role:** Incident Management Service Owner
- **Example Processes Involved with:** Incident Identification, Incident Logging, Escalation to Service Owner, Communication and Updates, Post Incident Review

© Kumar Pudashine

ITIL Structure : ??



© Kumar Pudashine

ITIL Structure : Five Phases

The service Lifecycle consists of five phases:

Service Strategy (SS)

- Focuses on service management as a strategic asset
- Defines standard & policies that will be used to design IT services.

Service Design (SD)

- Creating or modifying services & infrastructure architecture that are aligned to the business needs.

Service Transition (ST)

- Manages the transition of new or changed services into the production environment.

© Kumar Pudashine

ITIL Structure : Five Phases

Service Operation (SO)

- Effectiveness & efficiency in delivery & support.
- Maintain Stability
- Provide best practice advice & guidance on all aspects of managing the day-to-day operation of IT services

Continual Service Improvement (CSI)

- Create & maintain value for customers
- Plan, Do, Check, Act (PDCA)
