
API

APPLICATION PROGRAMMING INTERFACE

Presented by:
Ramesh Pokhrel

ONTENTS

- What is API
- Types of API
- What are Web API
- SOAP API
- REST API
- Soap vs Rest

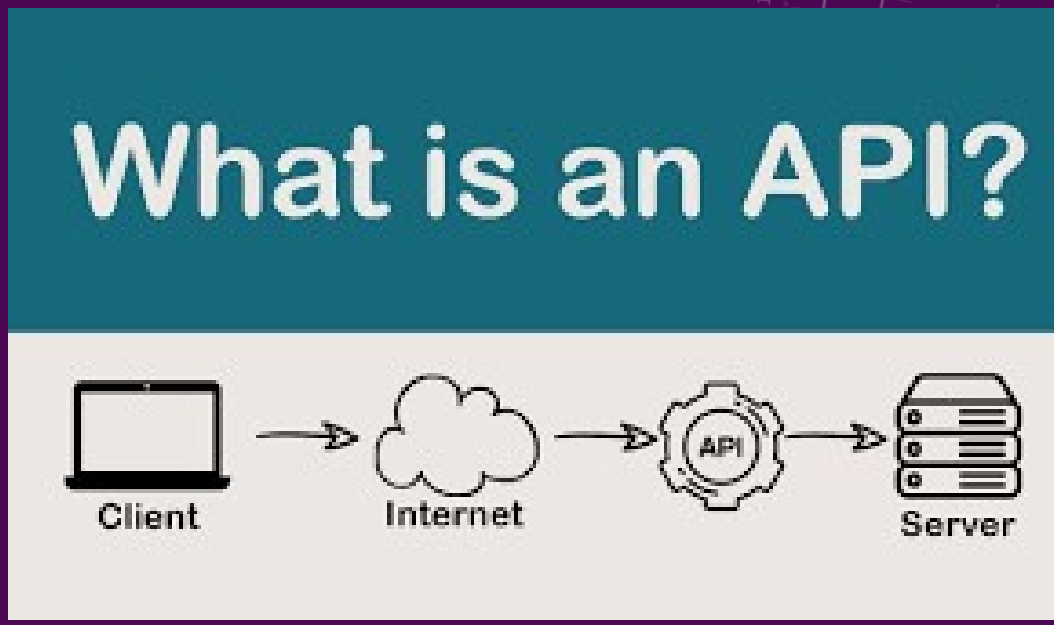
HAT IS API ?

PI stands for application programming
erface—

of definitions and protocols to build and
rate

cation software

PIs are mechanisms that enable two software
mponents to communicate with each other



PES OF API

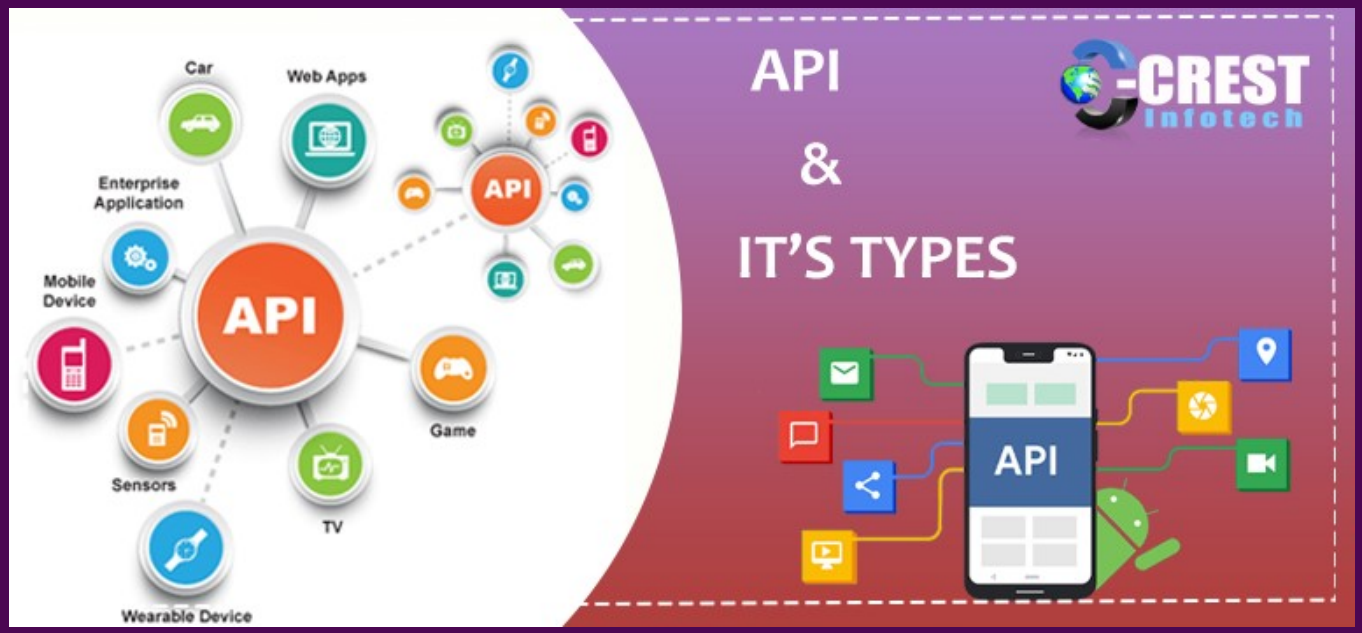
are four different types of APIs commonly used

BLIC → Open to anyone, No Restriction

VATE → Accessible by authorized users and some may give usage restrictions

RTNER → Used to communicate between two strategic business partners

MPOSITE → Approach to batch API requests sequentially into a single API call.



AT IS WEB API

API is a System to System interaction, in which

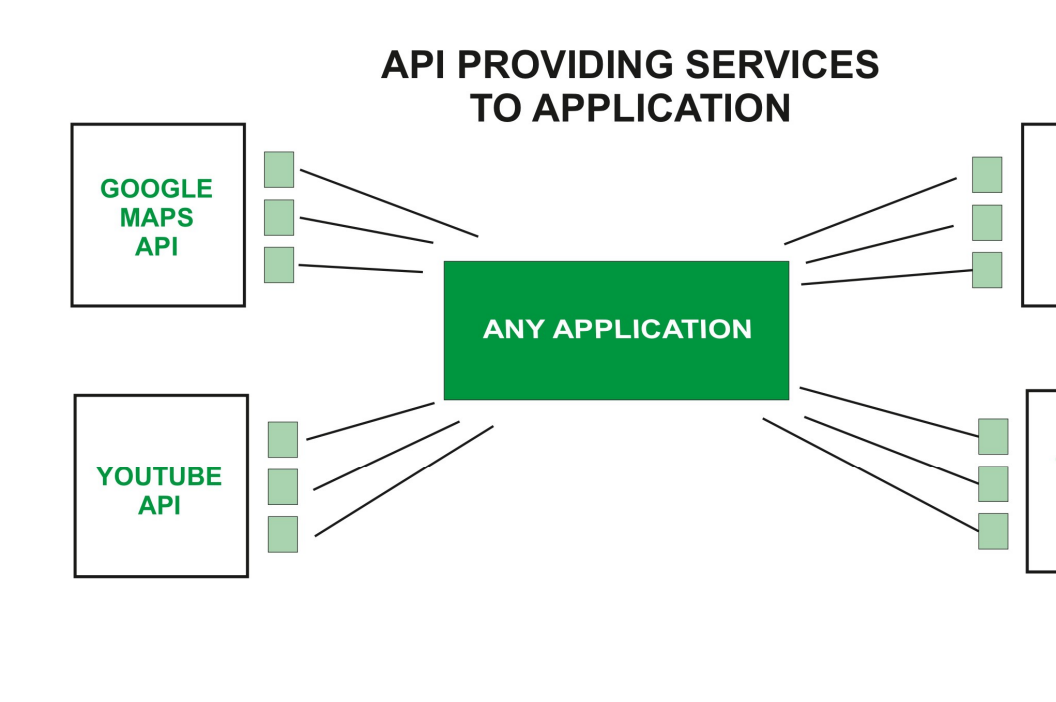
information from one system can be accessed by

, after the completion of execution the resultant
we

y as output is shown to the viewer.

d as an interface between two different
ications for

nicating with each other.



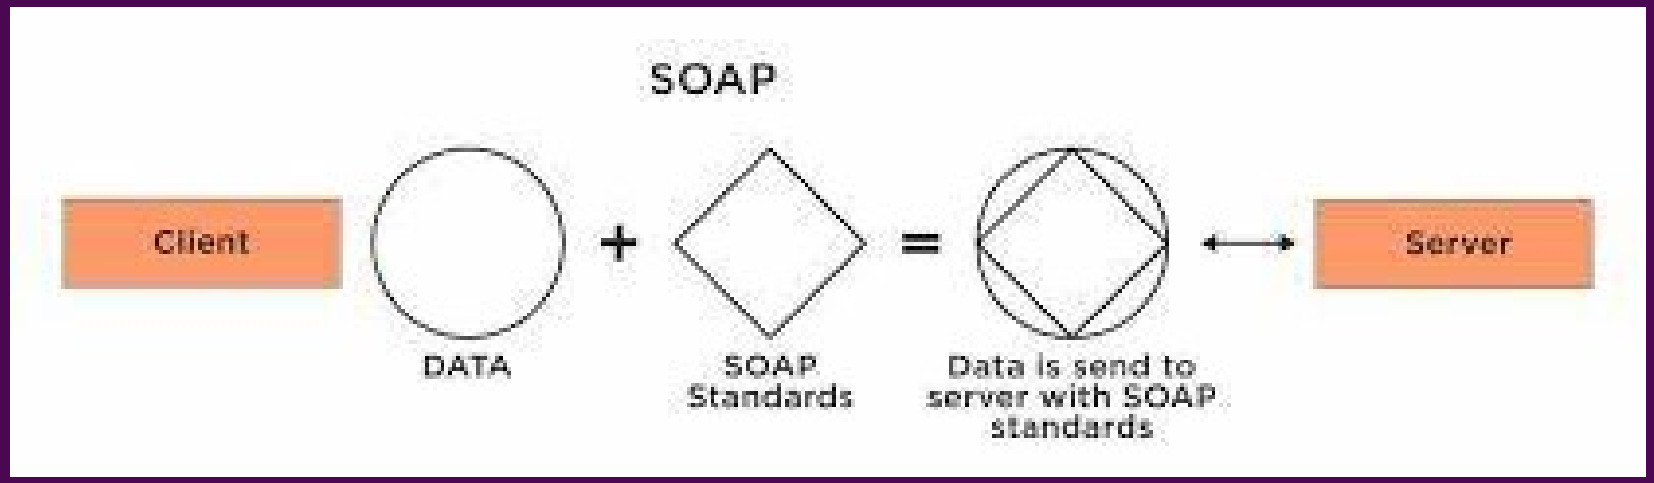
e of API →

gle Map API

ube API

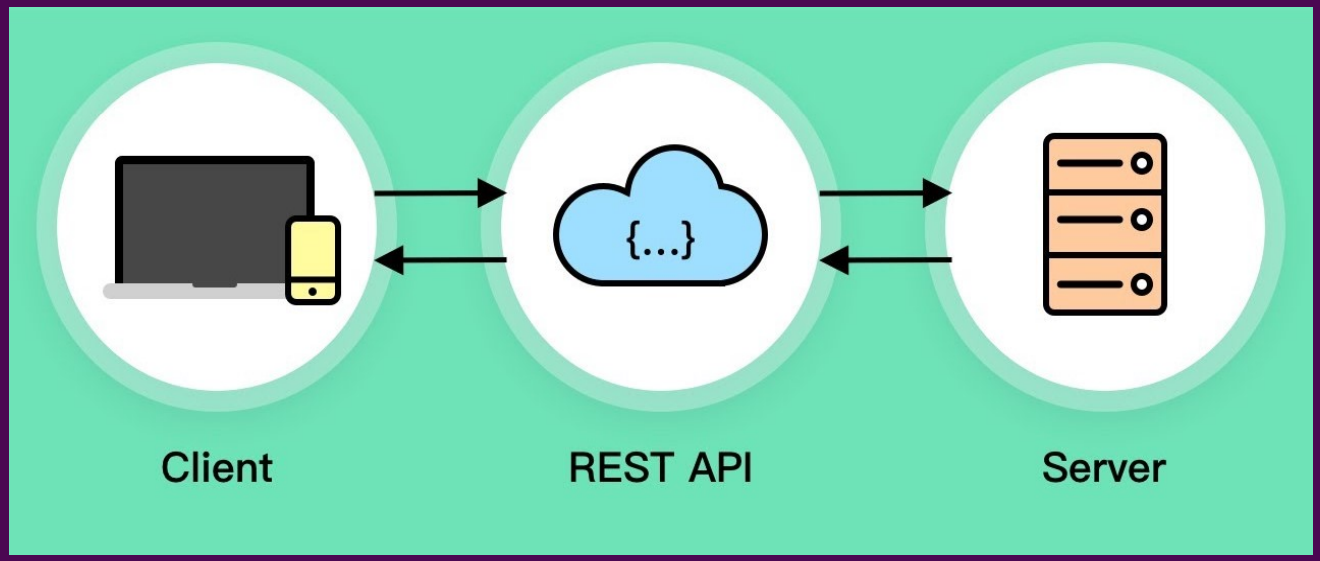
P (SIMPLE OBJECT ACCESS PROTOCOL APPLICATION) API

P is a messaging protocol specification for exchanging structured information in the
ementation of web services in computer networks



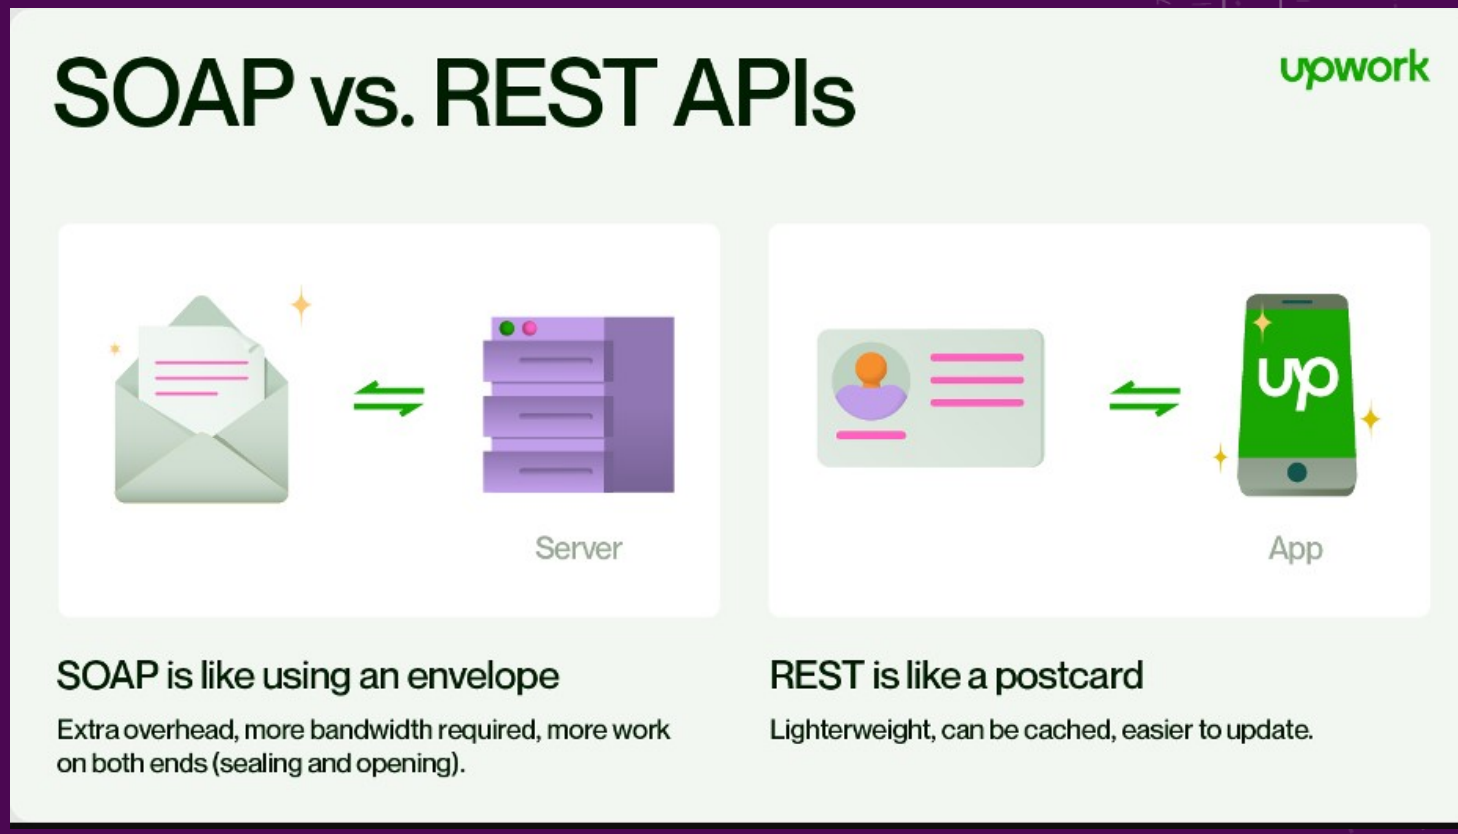
T (REPRESENTATIONAL STATE TRANSFER) API

ful API is an architectural style for an application program interface (API) that uses
requests to access and use data.



AP V/S REST API

hain difference is
SOAP is a structured
col, while REST is more
ble and less defined. REST
SOAP are two different
to connect applications
server-side data. Both of
PI formats use data that
humans and machines can
and both often use HTTP
cols.



THANK YOU EVERYONE FOR YOU ATTENTION
